## The best for patients and therapists.

### Experience bioresonance therapy with the apere-BMS

The apere-BMS is a complete novelty among bioresonance devices and raises bioresonance therapy to an unprecedented level. Based on over 40 years of practical experience, the apere development team has developed a state-of-the-art bioresonance device. Thanks to the optimal sharpening of the therapy signal, very precise results are achieved in diagnosis and therapy.

## Next level bioresonance

- The apere BMS shines with **patented features** and features achieves sharper and more **precise diagnosis and diagnosis Therapy achievements** than ever before.
- Simultaneous **low and high frequency therapy** is possible for the first time (0.245 Hz - 300 GHz).
- **Patient-friendly therapy** thanks to shorter therapy time.
- For the first time, **traditional Chinese medicine (TCM)** considered.
- **Consideration of biophysiological properties** in diagnosis and therapy.

Bioresonance therapy is recognised as a tried and tested therapy method in naturopathy, but is not accepted by current expert opinion within conventional medicine, and it is granted no healing effect by the latter. According to the supreme court jurisdiction (see, for example, decision of the Federal Supreme Court dated 06.02.2013 - I ZR 62/11), a curative effect can only be assumed if it has been proven in a so-called randomised, placebo-controlled, double-blind study with an adequate statistical evaluation. Whether patients subjectively experience alleviation or cure after the therapy is irrelevant to the assumption of a curative effect according to supreme court jurisdiction. As our products have not been subject to a randomised, placebo-controlled, double-blind study with an adequate statistical evaluation, advertising for our products is only allowed if, as stated above, a lack of curative effect is expressly pointed out. For more information and current jurisdiction, please click here. Insofar as information is provided by apere GmbH & Co. KG, apere GmbH & Co. KG assumes no liability for its up-to-dateness, correctness, completeness or quality. Liability claims against apere GmbH & Co. KG which relate to damages of a material or immaterial nature, caused by the use or non-use of the information provided or by the use of incorrect or incomplete information are excluded. Apere GmbH & Co. KG is only liable if a contract is concluded in accordance with the provisions of that contract.

#### Optimum sharpening of the therapy signal

Thanks to the EMV shielding in the apere resonator, inherent patient vibrations and therapy impulses can react with one another free from environmental impacts, such as electrosmog. The resulting optimally sharpened therapy signal can be transferred very precisely to the patient using a specially designed cable system and antenna.

#### More effective and shortened therapy time

Thanks to the five different time patterns that are generated by the refractor and that are to be used individually, the patient's responsiveness to the therapy signal increases.

#### Therapy impulse made more precise

The meridian frequency sweep results in a more precise testing and placement of the therapy impulse as only those frequency ranges are targeted that are actually relevant for the testing and therapy.

#### Amplification of the therapy signal according to homeopathic criteria

The amplification of the therapy signal based on the model of homeopathic dynamisation takes into account the perceptive capacity of a biologically vital system.

#### Latest technology

The apere-BMS was developed by therapists for therapists and combines state-of-the-art technology and science with absolute practicality.

#### Easy intuitive operation

To enable the therapist to work as smoothly as possible, one focus of development was placed on the user-friendliness of the BMS system, including an intuitive touch screen, many input and output cable connections, options for connecting an external mouse or screen, and a pause button for testing.

#### Modular design

Due to the modular design of the apere-BMS, it is always possible to extend your device easily and individually, depending on the therapy focus, your own knowledge or further development.

#### Modern design

Thanks to its modern and clear design, the apere-BMS is both a functional and a visual asset to your practice.

## A HIGH-PERFORMANCE BIORESONANCE DEVICE

### BMS basic device

**BMS stands for „Bioelectromagnetic Information Moderation System“. With this name, we have chosen a term which precisely describes the therapy method and is tenable in scientific circles.**

The modular design of the apere BMS is particularly notable. This feature allows you to add additional modules to your device, and in this way, to constantly specify and individualise your therapy.

Thanks to our extensive research, we are already working on new developments that can easily be combined with your BMS basic device in the future.

The apere-BMS exclusively works with analogue signal processing. We believe that the analogue processes of a biologically vital system can not be mapped out and reproduced in digital form.

The integrated 10.1 inch touchpad and the turn-and-click wheel guide you intuitively through the therapy settings of the apere-BMS.

With the intuitive menu navigation you will quickly learn to implement the desired settings and therapy options to suit your ideas and needs - beyond all therapy programs.

## ALL FUNCTIONS AT A GLANCE

### Meridian frequency sweep

The meridian frequency sweep is the frequency filter of the apere-BMS. The working range of the frequency filter has a bandwidth of 0.245 Hz to 4.05 MHz. The special feature is the opening of specific frequency bands, which map the twelve main meridians and the eight Voll's vessels. Thanks to this targeted filtering, the therapy impulses are specified more precisely. Sweeping around selected centre frequencies is also possible.

### Homeopathic dynamisation

With the apere-BMS you will be able to dynamise the therapy signal to meet homeopathic criteria. The important thing here is that it is not a purely technical amplification of the therapy signal, but an accentuation of the substances in the entrance by a corresponding homeopathic dynamisation. This means that the apere-BMS speaks the language of the biologically vital system.

### Refractor

The function of the refractor is to interrupt the therapy signal selectively by signal-free times. In this way, the body or the body cell is given the necessary time to respond to the therapy impulse. These targeted interruptions of the therapy signal result in a more effective and shorter therapy time. The refractor has five different time patterns that can be used therapeutically and are calculated on the basis of the physiological and psychological time constants corresponding to the rhythm of nature.

### Phase modulator

The phase modulator allows you to treat your patients with therapy types A or Ai. It is also possible to run therapy type A and Ai alternately.

## Resonator

With the resonator, we have created a space in which the electromagnetic field of the patient can react to therapy information, undisturbed by external influences. Thanks to the EMC-shielded resonator, the therapy signal is optimally sharpened without being affected by external influence, such as electrosmog.

Due to the newly developed cable system and a specially developed antenna (bioplasmic activator), the therapy signal is precisely transmitted to the entire biological system of the patient.

With the apere resonator in combination with the apere-BMS, a simultaneous low and high frequency therapy (0.245 Hz - 300 GHz) can be performed for the first time.

With the wide frequency spectrum of the resonator, even the highest range of meridian frequencies can be reached. In addition, high frequencies in a biologically vital system mean a high degree of information compression, which results in an increase in the quality of the therapy due to the high-frequency therapy that is possible with the resonator.

## Blood drop module

This module revolutionises remote treatment via the blood drop. It is a quantum therapy that is based on the use of the entanglement principle. Due to the non-local effect, patients can be treated independently of the location.

With the tele-applicator, a shielded double-chambered honeycomb, one drop of blood can be placed both at the entrance AND the exit. This means that the change caused in the patient by the therapy can be directly fed back and included in the ongoing therapy.

## Meridian chakra oscillator

The analogue meridian and chakra frequencies generated in the meridian chakra oscillator are put into beat with the patient's confused vibrations. This creates a new vibration, which then triggers the healing impulse.

3

## Expert control

The expert control offers further individualisation of all settings of the device, such as the selection of individual dynamisation levels in the homeopathic dynamisation, the selection of self-tested times at A and Ai alternately, your own time settings in the frequency sweep as well as the short- and long-term storage of therapy steps. In this way, you can create your own therapy programs.

## The apere seminar - understand and apply modern bioresonance

In our apere seminar, we train you in bioresonance therapy and familiarise you with the conceptual background and the operation of the apere therapy systems.

We show you new practice-relevant approaches, further developments and potentialities of the bioresonance method, which have not been feasible in daily use with the devices available so far. With the technology that is now available through the apere-BMS, a new level of professionalism can be reached in naturopathic therapy. Our instructors will introduce you to the device system and provide up-to-date knowledge in bioresonance therapy.

A special highlight of the seminar are the practical exercises where you can convince yourself of the quality of the apere products. We invite you to test the apere-BMS yourself, while our employees are at your disposal to assist and advise you.

**Dates and further information  
you will find on our homepage**
